

BECAUSE DENTAL PROCEDURES ARE ALWAYS CHANGING...

here's help to keep you abreast

Glickman & Smulow: PERIODONTAL DISEASE
Clinical, Radiographic and Histopathologic Features

This new work is devoted exclusively to the clinical pathology of periodontal disease. The radiographs of early and advanced periodontal disease, furcation involvement and infrabony defects, and combined periodontal periapical disease are placed along side of histopathologic sections of the human jaws they represent. This feature provides an understanding of the radiographic interpretation and diagnosis of various types and degrees of severity of periodontal disease. The authors have included a section on experimental pathology which illustrates the clinical nature of selected studies. Here you will find important information on the effects of electrosurgery of the periodontal tissues, effects of diabetes, nutritional deficiencies, and hormonal disorders.

By the late **Irving Glickman**, B.S., D.M.D. and **Jerome B. Smulow**, A.B., D.D.S. Just Ready. About 225 pp., 105 figs. About \$37.50. Order No. 4138-5.

Ibsen & Neville:
ADHESIVE DENTAL RESTORATIONS

Here is a totally new book that discusses all aspects of clinical adhesive procedures in dental treatment, applying the latest findings in plastics technology to modern practice. The book brings together a critical review of the diverse literature on fissure sealants, the repair of fractured incisal angles, adhesive fluoride coatings, nonsoluble luting agents, orthodontic adhesives, aesthetic coatings and use of composites in adhesive prosthodontics. The authors cover both theoretical and practical aspects of adhesive restorative dentistry including materials, applications, techniques and clinical results. One complete chapter is devoted to "trouble shooting," which discusses all the possible reasons for clinical failures.

By **Robert L. Ibsen**, D.D.S. and **Kris Neville**. Just Ready. About 240 pp., 245 ills. About \$20.00. Order No. 4965-3.

Oringer: **2nd Edition**
ELECTROSURGERY IN DENTISTRY

Completely revised to incorporate every advance in electrosurgery made over the past decade. Dr. Oringer has updated the information on electrosurgical circuitry and included new chapters on dental research, anesthesia, electrosurgery in undergraduate study, and treatment of "inoperable" oral cancer by electrocoagulation. Among the new methods reviewed are: conservative management of traumatic and mechanical pulp exposure, a one-visit definitive endodontic treatment for the chronically suppurating root canal, reconstruction of a vestibular space where the alveolar ridge is completely resorbed, treatment of ankyloglossia by lingual frenotomy, treatment of leukoplakia by electrocoagulation and treatment of hyperplasia.

By **Maurice J. Oringer**, D.D.S., Just Ready. About 1150 pp., 380 figs. About \$32.50. Order No. 7001-6.

Kilpatrick: **3rd Edition**
WORK SIMPLIFICATION IN DENTAL PRACTICE
Applied Time and Motion Studies

Designed to help today's dentist lighten his workload, this revised edition includes a wealth of suggestions on how to perform every dental and administrative task smoothly and more effectively. The book contains information on the efficient operation of almost every piece of equipment from the simplest scaling instruments to the most complex modern units employed today. The functions of the dentist and assistant are outlined in clear step-by-step fashion and refined with an emphasis on time and motion economy. In addition, the book is the perfect guide to help master the techniques of four and six-handed dentistry.

By **Harold C. Kilpatrick**, D.D.S. March 1974. 804 pp. 932 ills. \$28.00. Order No. 5417-7.
