Dear Mr. Sliney:

Enclosed is information on the EPRI High Voltage Transmission Research Facility. Although the brochure focuses on the power line engineering work at HVTRF, the group there often puts on programs that allow visitors to experience the environment of high voltage AC and DC lines. Part of the program, for example, allows an individual to find out the level of field that he may begin to perceive.

Additionally, research on instrument development is conducted for EPRI at the facility, and this work as well as the results of human exposure monitoring activities could be discussed.

EPRI would be pleased to host a visit by your ACGIH Committee at HVTRF. You had suggested that the week after the Toronto Symposium might be a good time. We can work out a mutually agreeable time over the coming months.

[- End of September or early October. AKH]

Sincerely yours,

Robert M. Patterson, Sc.D., C.I.H.
